Syllabus

GATE - 6 to 8M.

IES Obj \rightarrow 5 to 60M

Conv \rightarrow 60 to 70M.

\rightarrow BASICS of measurement system

\rightarrow Error Analysis

\rightarrow Analog Instruments

\rightarrow PMMC, EMMC, MI, FSV, THERMAL Inst.

\rightarrow Rectifier Type Inst.

\rightarrow Measurement of Resistances

\rightarrow ~~All areas~~

\rightarrow D.C Bridge

\rightarrow Measurement of L, C, & M.

\rightarrow AC Bridges

\rightarrow Meas. of power

\rightarrow DC & AC power

\rightarrow Meas. of Energy

\rightarrow Potentiometer

\rightarrow pf. meter

\rightarrow Flux meter

\rightarrow Inst. T/F.

Electronic

\rightarrow Q Meter

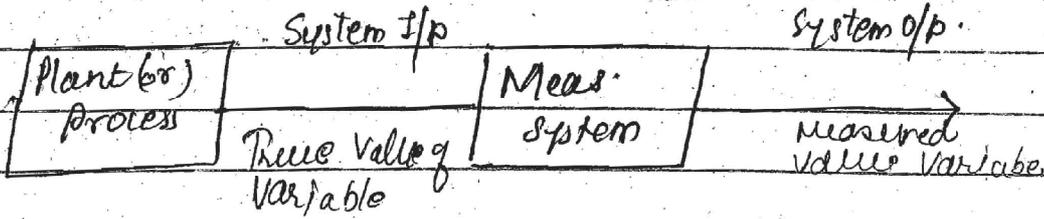

\rightarrow C.R.O

\rightarrow DVM

\rightarrow TRANSDUCERS (Only for I.E.S)

\rightarrow Bridges & Potentiometer, Measurement of v_f , I, P, Energy & Pf.
I.T, D.V.M & DMM, Phase, time & freq. measurement, Oscilloscope
& Error analysis

→ Generalized measurement system :-

Error $\delta A = A_m - A_T$

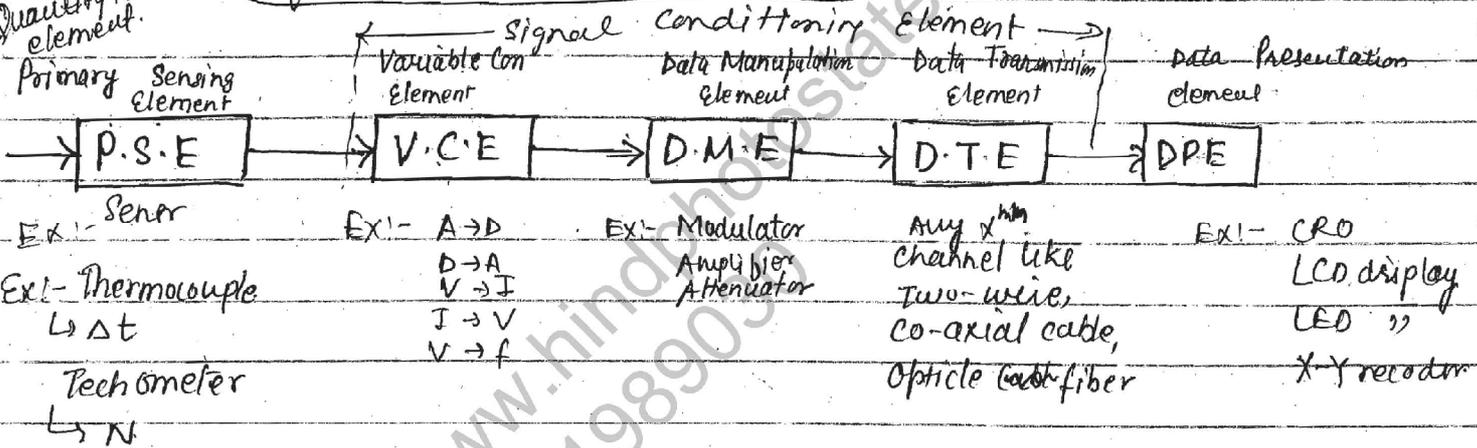

A_m = measured value

A_T = True value.

$\text{Error} = \text{System o/p} - \text{System I/p}$

If error = +ve $\Rightarrow A_m > A_T$
 If error = -ve $\Rightarrow A_m < A_T$

Quantity to be element.

- Purpose of measurement system is to present an observer with a numerical value, which consists of Nos. 0-9.
- Most commonly preferred display is digital display of B.C.D-7 segment type.
- If the type of display is digital it is more user friendly, easy to readable.

1) Primary Sensing Element :- The element which has direct contact with the process known as primary sensing element (or) sensor (or) Transducer.

→ Transducer is a device which can convert one form of the energy into another form of energy. That means which can convert non electrical energy into electrical energy.

Variable Conversion Element (VCE):- The element which is used to convert one form of the signal into another form of signal, the nature of the signal gets changes at its output.

Ex:- ADC, DAC, V/I to Current, Current to V/I, etc.

Data Manipulation element:- The element which is used to modify the level of the signal, without changing the nature of the signal i.e. which can either amplify or attenuate the level of the signal.

Data Transmission Element (DTE):- The element which is used to transmit the signal to the presentation centre.

Data Presentation Element (DPE):- The element which is used to display the data or to store the data for future analysis.

Ques. In a generalized measurement system the following building blocks are given as

1) VCE 2) DTE 3) DME 4) DPE 5) PSE.

Arrange these blocks in a sequential order for the purpose of measurement.

→ 5, 1, 3, 4, 2, 4.

NOTE:-

The quality of instrument is always decided by % relative static error, it is always calculated w.r.t. TRUE Value.

Q. $A = \delta A = 1A$ $\delta B = 10 \text{ Amp}$ which one is more ~~acc~~ quality

a) Only A, Only B, both A + B, ~~None~~ None

$$\% \text{ Relative static Error} = \frac{A_m - A_T}{A_T} \times 100 = \frac{\delta A}{A_T} \times 100$$

(or) % R.S.E

$$\text{(or) \% Limiting Error} = \left(\frac{A_m}{A_T} - 1 \right) \times 100$$

(or) % L.E

L.E = Limiting error

$$\boxed{\% \text{ Accuracy} = 100 - (\% \text{ L.E})}$$

Ques.

(A)

$$\delta A = 1 \text{ Amp}$$

$$A_T = 2 \text{ Am}$$

(B)

$$\delta B = 10 \text{ Amp}$$

$$B_T = 1000 \text{ Am}$$

which one is more accurate

$$\% \text{ R.S.E} = \frac{\delta A}{A_T} \times 100$$

$$= \frac{1}{2} \times 100$$

$$\% \text{ A.E} = 50\%$$

$$\% \text{ R.S.E} = \frac{\delta B}{B_T} \times 100$$

$$= \frac{10}{1000} \times 100$$

$$\% \text{ A.E} = 1\%$$

$$\Rightarrow \text{Correction factor} = \frac{1}{1 + E_r}$$

E_r = Relative Limiting Error
